Delta of 4 international rivers

- Rhine
- Meuse
- Scheldt
- Ems

Marine waters

- North Sea
- Wadden Sea

Watermanagement is required
for good governance

Based on integrated approach

Monitoring is important source
for information

Monitoring Networks

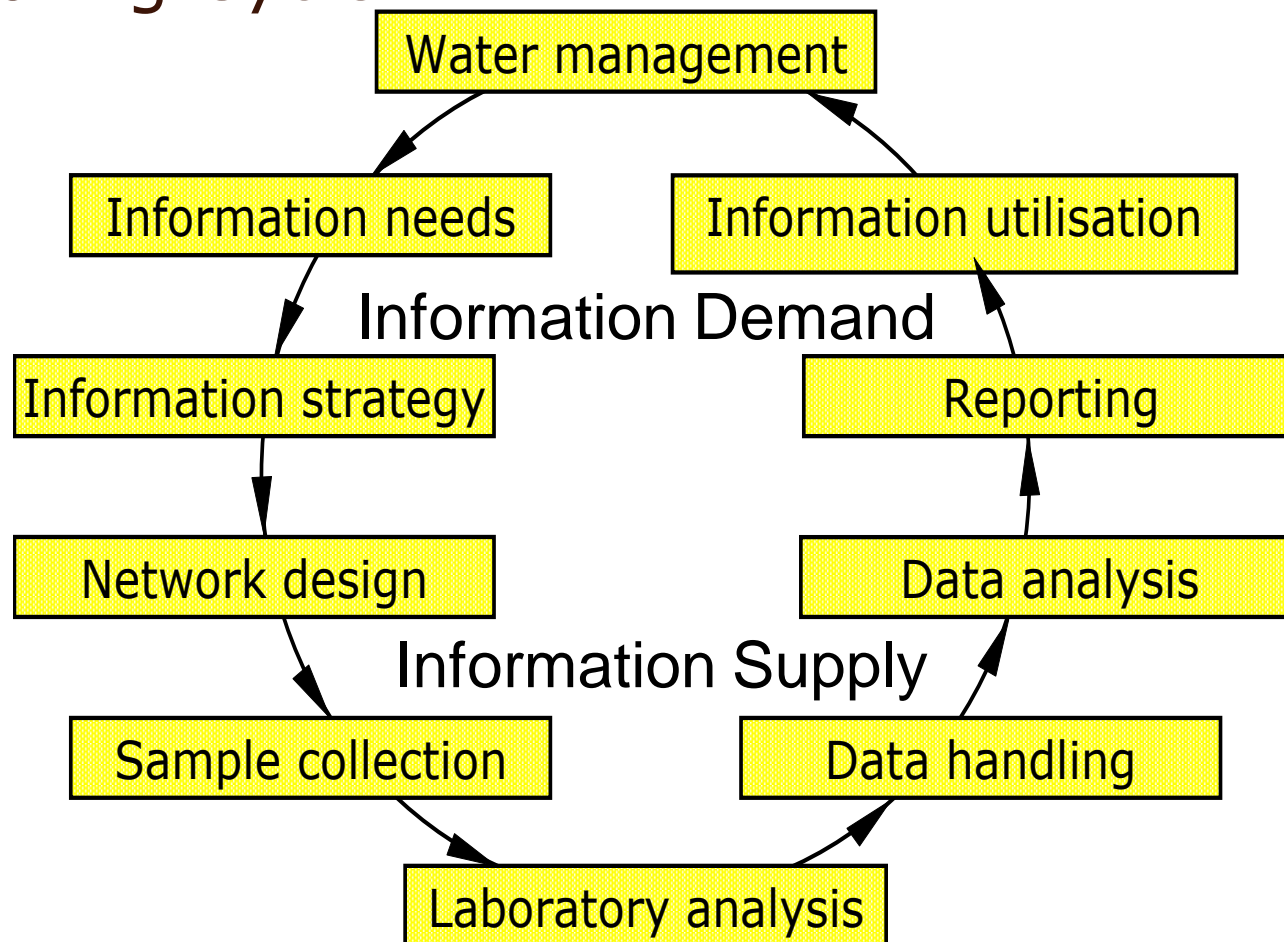

- Physical monitoring - since \pm 1800
- Chemical monitoring – since 1952
- Biological monitoring - since 1992

- Automated water quality monitoring – since 1978

Monitoring Cycle

Information Needs

Water quality monitoring necessary for:

➤ **National water management**

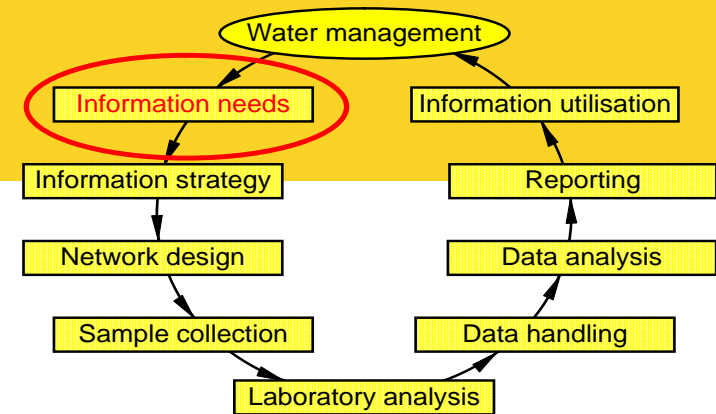

- policy evaluation
- determination of measures and assessment of their effectiveness
- status and trends in concentrations and in loads
- compliance testing

➤ **International agreements / obligations**

- OSPAR
- TMAP
- International River Commissions

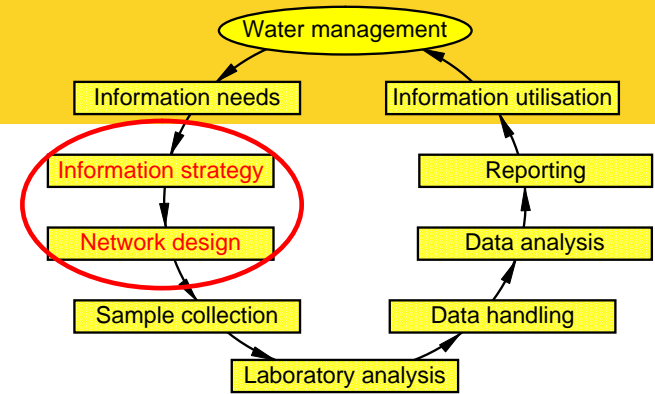

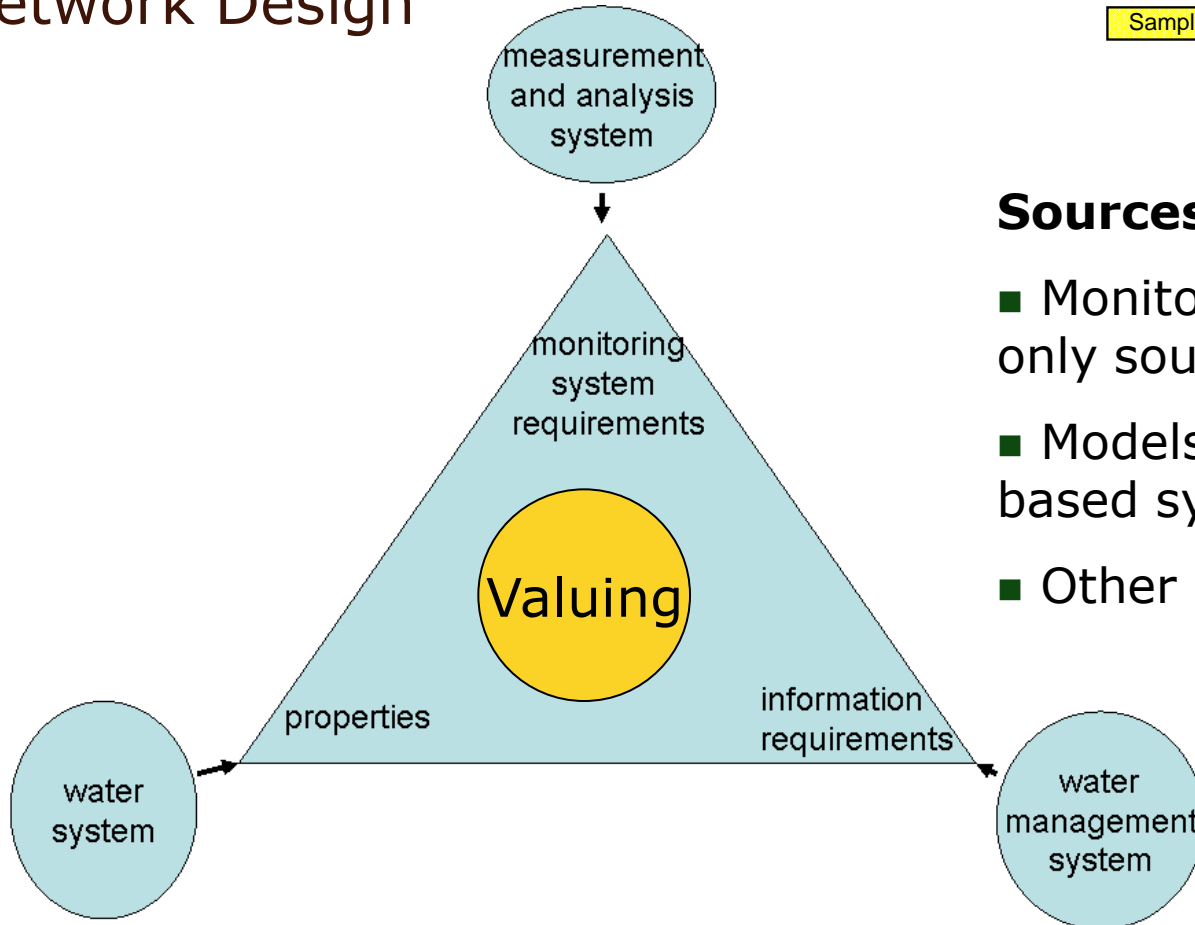

➤ **EU (European Union) obligations**

- Water Framework Directive (WFD)
- Marine Strategy Framework Directive (MSFD)
- Nitrate Directive
- Natura 2000

Information Strategy & Network Design

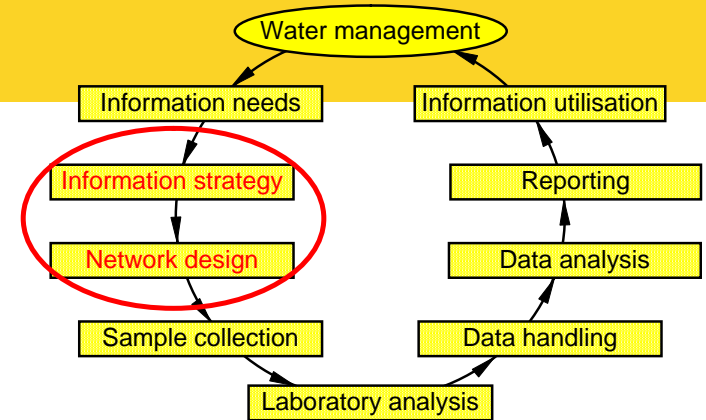

Sources of Information

- Monitoring is not the only source
- Models, knowledge based systems
- Other sources

Design of Monitoring Networks

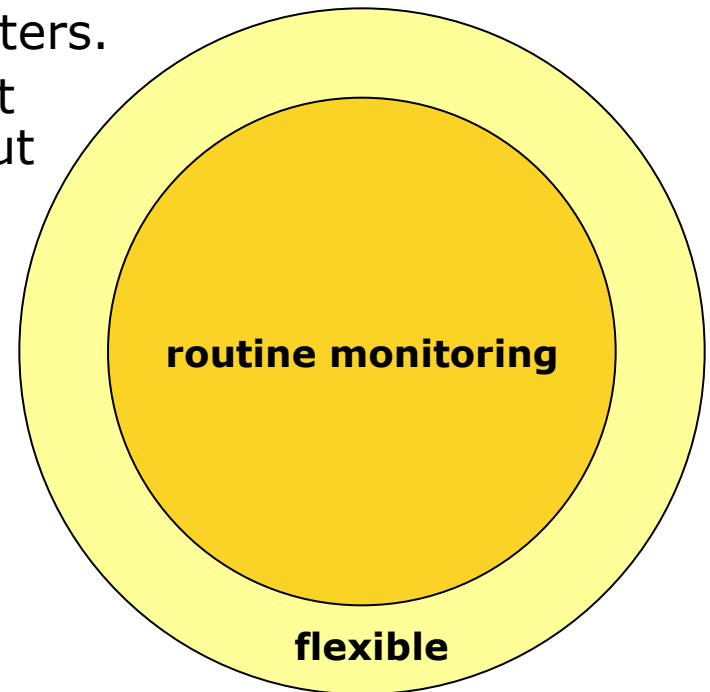

- Locations
- Frequency
 - 1- 52 times a year
- Compartment
 - Water
 - Suspended matter
 - Sediment
 - Biota
- Parameters
 - general parameters (nutrients, T)
 - organic micro pollutants (pesticides)
 - inorganic micro pollutants (heavy metals)
 - radiochemical parameters
 - species groups

Monitoring Strategy of Chemical Networks

- **routine monitoring**
 - Regular samples of $\sim 250+$ parameters.
= the backbone of the policy relevant information, and is sufficient for about 80% of the international needs for information
- **project (flexible) monitoring**
 - Temporary
 - Inventories (pesticides, medicines, hormone disrupting substances)
 - Investigative monitoring

Chemical monitoring network

Compartments:

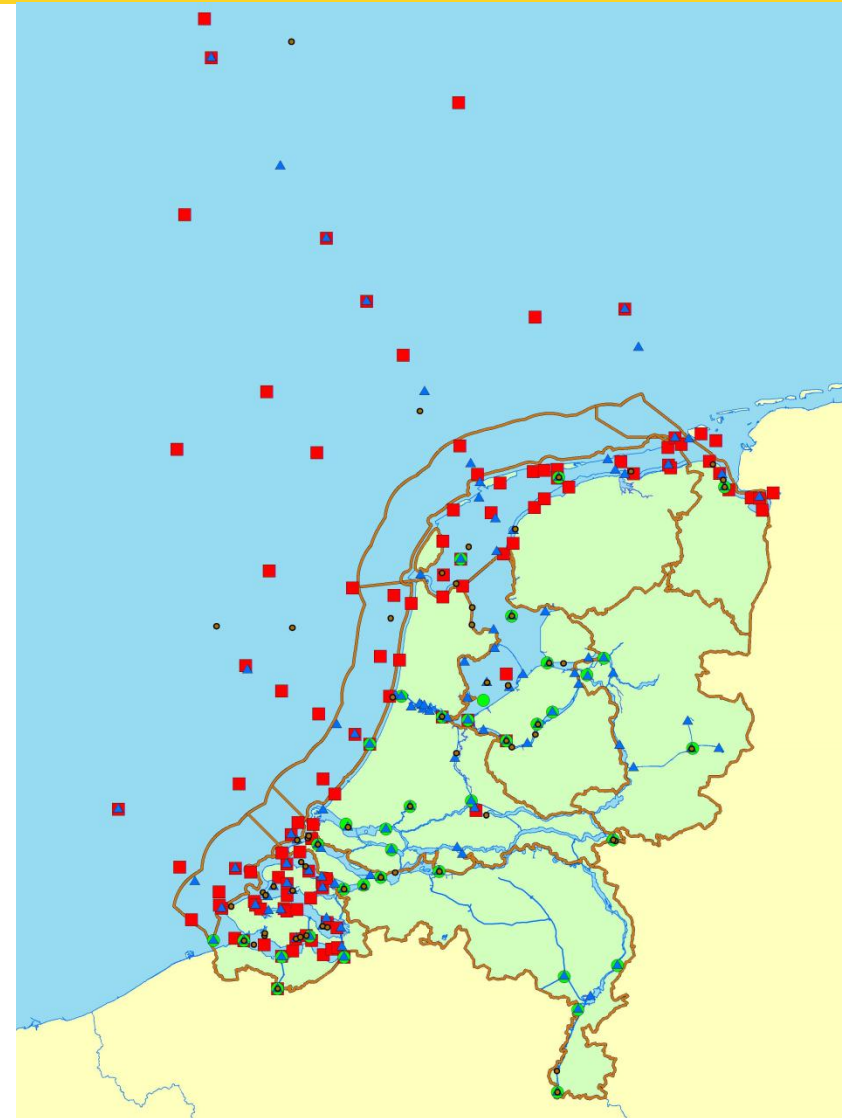

- Biota
- ▲ Water
- Suspended solids
- Sediment

Marine waters

Water:	37 loc's, 280 par's
Suspended solids:	4 loc's, 140 par's
Sediments:	107 loc's, 130 par's
Biota:	39 loc's, 10-80 par's

Inland waters

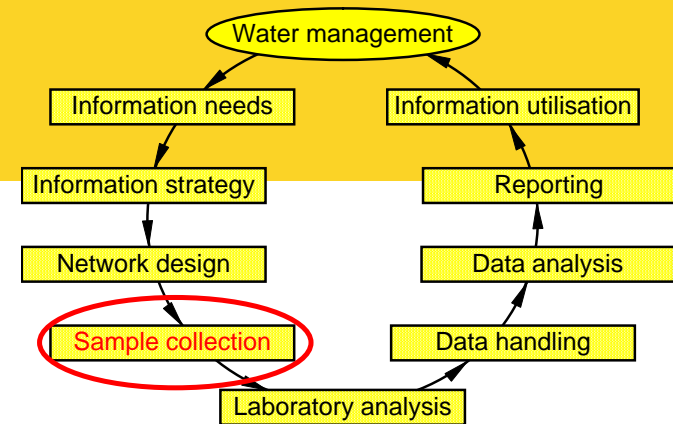

Water:	52 loc's, 340 par's
Suspended solids:	21 loc's, 160 par's
Sediment:	1 loc, 95 par's
Biota:	18 loc's, 45 par's

Biological Monitoring Network

Quality Elements	<	1	1	1	1	1	1	1	1	1	2	2	2	2	2	2	2	2	2	2	2	2
	9	9	9	9	9	9	9	9	9	9	0	0	0	0	0	0	0	0	0	0	0	0

Phytoplankton	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Zooplankton		x	x	x	x	x	x	x	x	x												
Macrozoobenthos			x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Phytobenthos													x	x	x	x	x	x	x	x	x	x
Macrophytes – water plants			x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Seagrass	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Waterside plants						x	x	x	x	x	x	x	x	x	x	x	x					
Ecotopes										x	x	x	x	x	x	x	x	x	x	x	x	x
Salt marsh mapping		x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Fish (active / passive)		x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Waterbirds		x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Breeding birds										x	x	x	x	x	x	x	x	x	x	x	x	x
Scoter			x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Seabirds and mammals	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x
Ecotoxicology						x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x

Sample collection

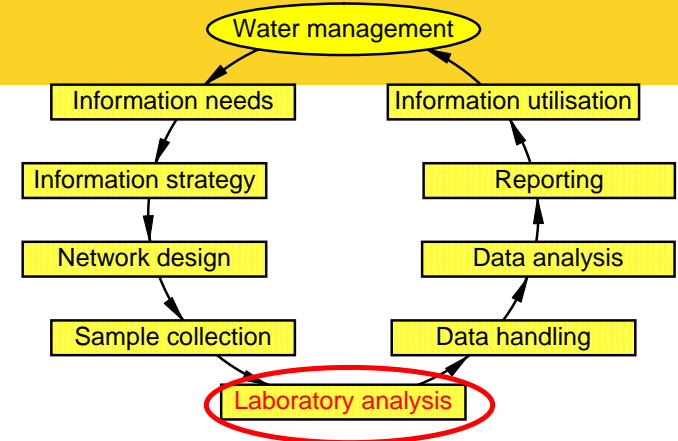

- Monitoring stations Eijsden and Bimmen-Lobith
- RWS Regional services (MID)
- Cooperation with drinking water companies
- Commercial companies
- Research institutes, voluntary organizations

Laboratory analysis

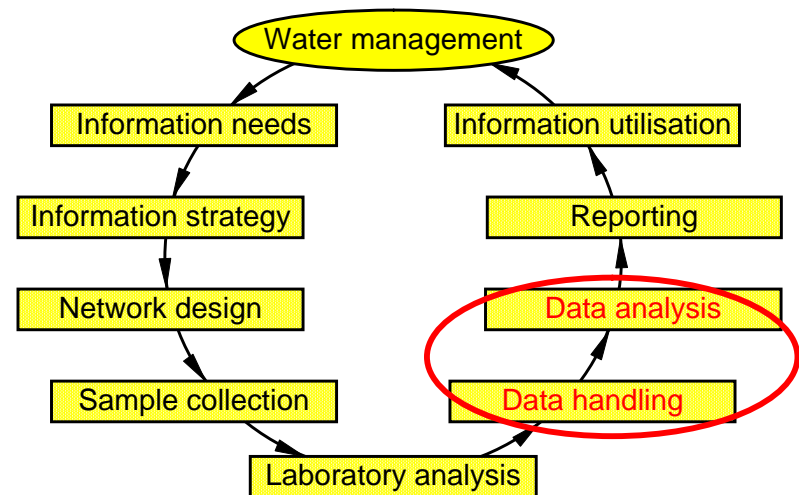

- Laboratory of Centre for Water Management
- Commercial laboratories
- Drinking water companies (data exchange)

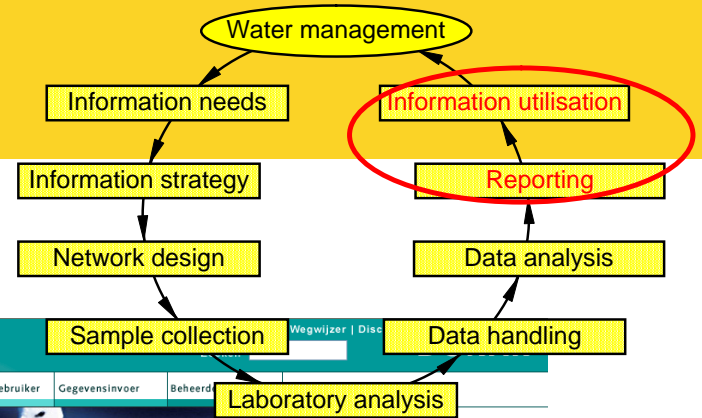

Data Handling and Data Analysis

- Control of completeness
complete conform planning? → complete
double data? (data from different methods possible) →
another project code
- Control of plausibility
faults? → remove
outliers → flag
- Calculation of statistical means
annual year concentration, P90

Information Reporting en Utilisation Use and Products

- Central database
- International Reporting
- Primary Reports
- Water system Reports
- Thematic reports
- Operational Plans
- Products of Others

The image shows three overlapping screenshots from the website of the Dutch Ministry of Transport, Public Works and Water Management (Ministerie van Verkeer en Waterstaat).

- Top screenshot:** A news article titled "Biologische monitoring zoete rivieren" (Biological monitoring of freshwater rivers) with a sub-headline "Watervogels als indicator voor de ecologische toestand" (Waterbirds as an indicator for the ecological status). It features a map of the Netherlands and a waterbird.
- Bottom-left screenshot:** A navigation menu for "Biologie" (Biology) with sub-items like "Monitoringnieuws", "Trends in water", "Nietprocessen", "Nietplanning", "Nietresultaten", "Integral", "Fysica", "Chemie", "Biologie", "Waterenbodem", "Productcatalogus", "Gegevensaanvraag", "Berichtgeving", "Instrumentarium", and "Links".
- Bottom-right screenshot:** The cover of a report titled "WEET WAT ER LEEFT LANGS RIJN EN MAAS" (Know what lives along the Rhine and Maas), subtitled "ECOLOGISCHE TOESTAND VAN DE GROTE RIVIEREN IN EUROPEES PERSPECTIEF" (Ecological status of the great rivers in European perspective). The cover shows a landscape with water and a tractor.

Reports to national parliament

EU-reports

Reports for international commissions

2.1.4

Copper in surface water

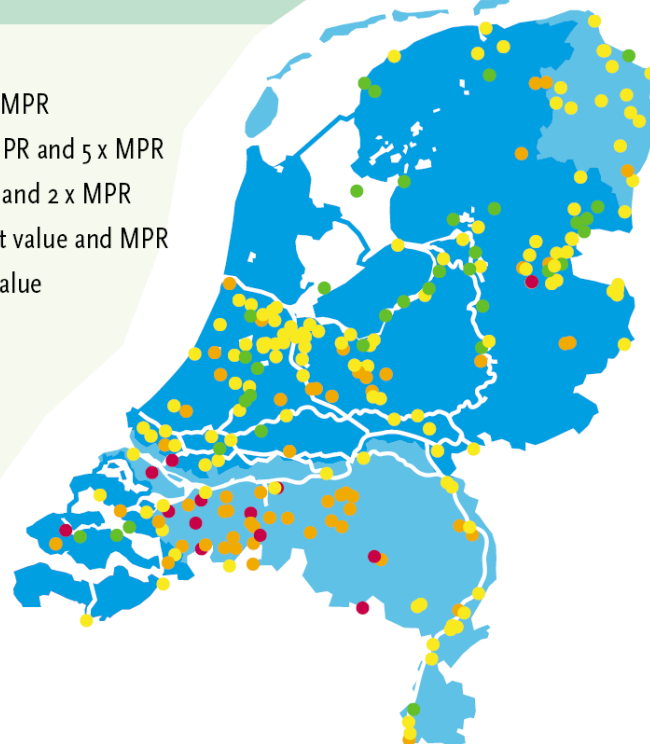

River Ems
River Rhine

River Meuse
River Scheldt

— MPR = maximum permissible risk levels

- more than 5 x MPR
- between 2 x MPR and 5 x MPR
- between MPR and 2 x MPR
- between target value and MPR
- below target value

Trends in water management and monitoring

- Information needs exploration
- Information strategy development
- Innovation:
 - ✓ remote sensing,
 - ✓ smart buoys,
 - ✓ ferrybox, flowcytometer,
 - ✓ use of models,
 - ✓ DNA techniques
- National and international cooperation (IHW, IHM)
- Exchange of data and information (EMODNET)

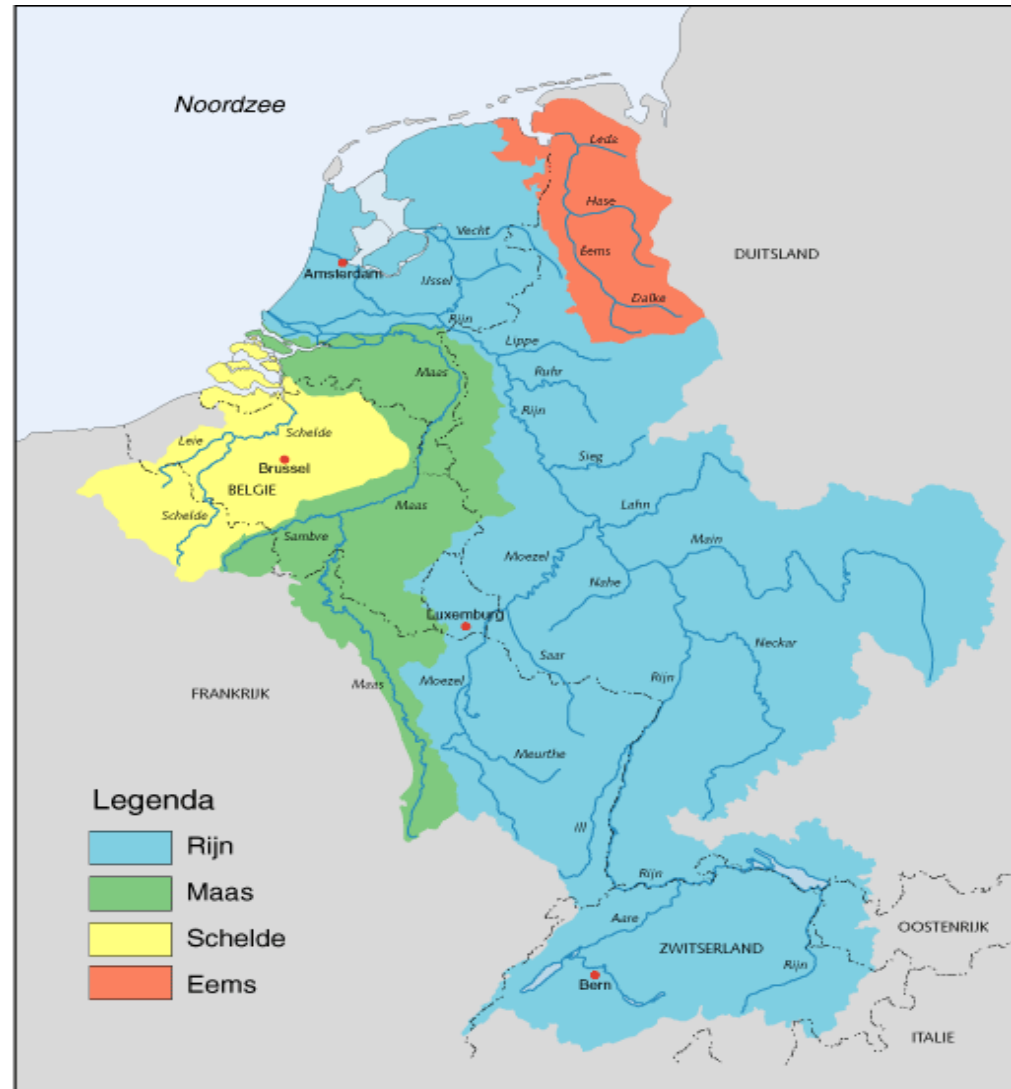

Water Framework Directive (WFD)

Environmental Objectives (**Article 4**):

“Member States shall protect, enhance and restore all bodies of surface water ... with the aim of achieving good surface water status at the latest 15 years after the date of entry into force of this directive **(2015)**”

- River Basin approach
- Good Ecological Status by 2015
- In every water body
- Monitoring is a **MUST**

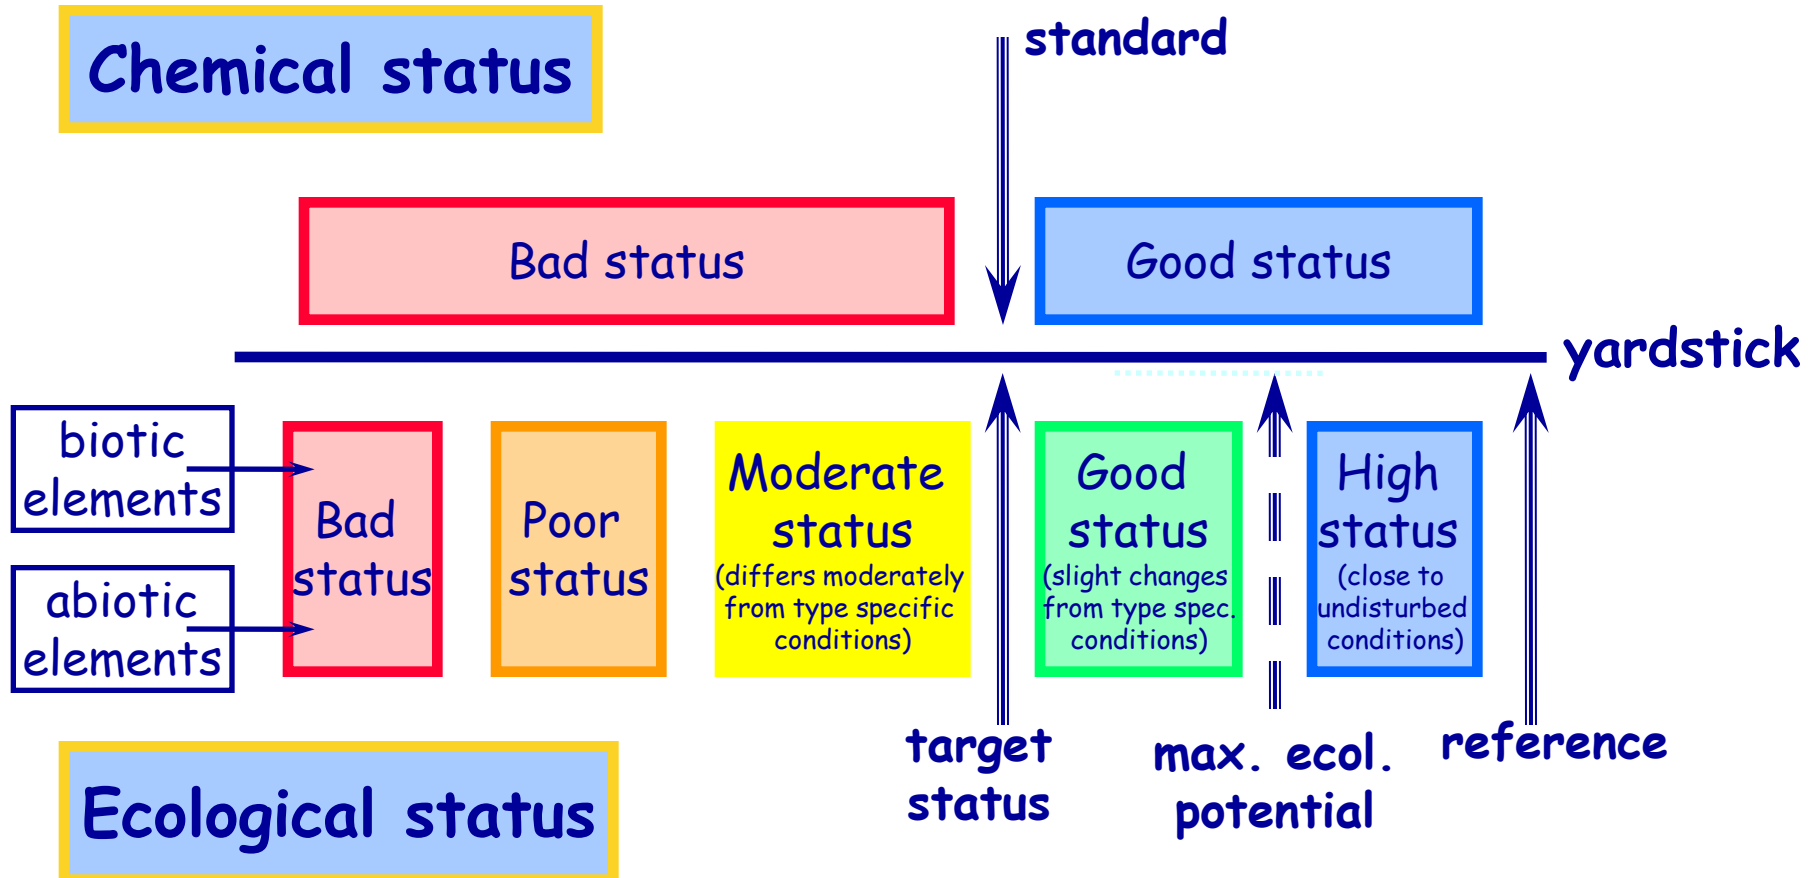

- **One out all out**
- **Programmes of measures**

Ecological assessment (EU Water Framework Directive) classification & presentation

nee

Water-quality status = Chemical status + Ecological status / potential

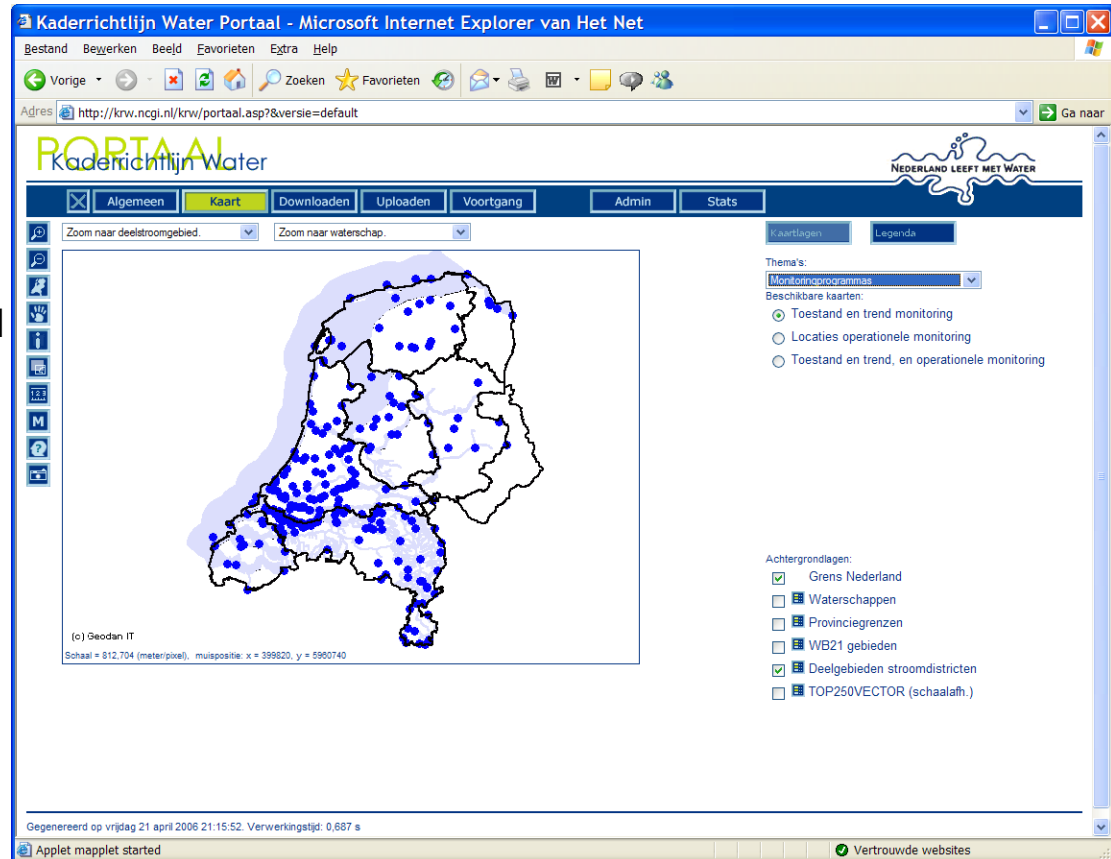

Water Framework Directive Quality Elements and Frequencies

Discipline	Quality element	measuring frequencies (yr ⁻¹)			
		R rivers	L lakes	TW transit waters	CW coastal waters
Biology	phytoplankton		6	6	6
	phytobenthos	1	1		
	macrophyten	1	1		
	marcoalgae			1	1
	angiosperms			1	1
	macrofauna	1	1	2	1
	fish	1	1	2	
Chemistry	priority substances	12	12	12	12
	other substances	4	4	4	4
	physico-chemical parameters	4	4	4	4
Hydro-morphology	hydrologic regime	conti- nuously	high frequent	high frequent	high frequent
	river continuity	1			
	morphology	1	1	1	1

Marine Strategy Framework Directive

An integrated approach to the ecosystem:
effects of human activities on marine ecosystem

- Fisheries
- Shipping
- Winning of oil and gas
- Wind energy
- Cables and pipes
- Military activities
- Recreation and tourism
- Emissions from air or land
-
-

11 Descriptors of Good Environmental Status

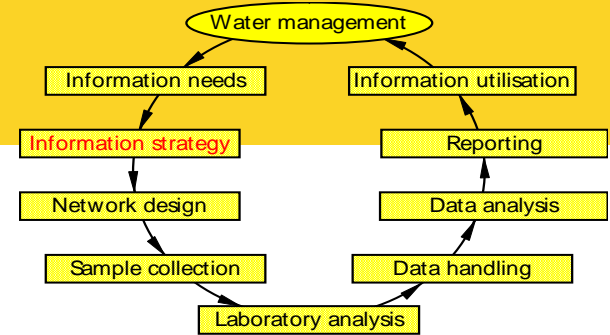

- Biological diversity
- Non-indigenous species
- Commercial fish
- Food webs
- Eutrophication
- Sea-floor integrity
- Hydrographical conditions
- Contaminants in water, sediment and biota
- Contaminants in fish and seafood (for human consumption)
- Marine litter
- Energy

Monitoring Types

- Types of Monitoring
 - Routine monitoring
long-term, status and trends, compliance testing, less frequent, equidistant, policy
 - Operational monitoring (early warning)
continuous monitoring, fast response
 - Project monitoring
research, short-term
- Differences in monitoring frequency, parameters, locations
- Combination of different types of monitoring

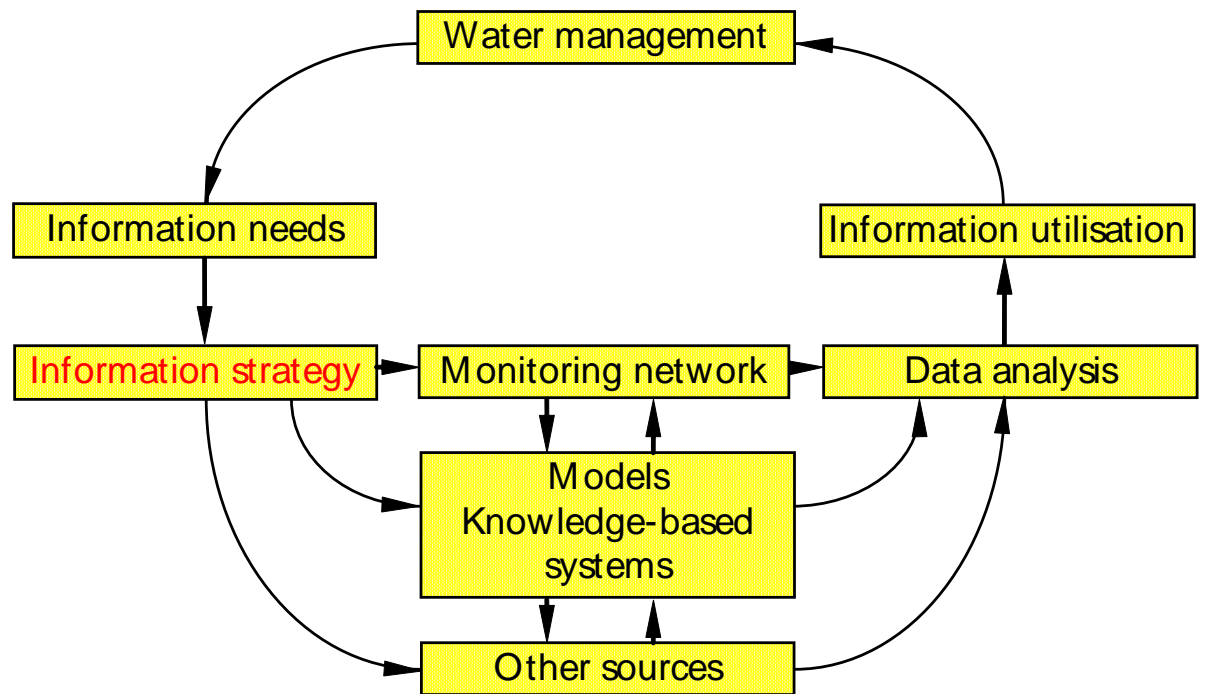

Information Strategy

Sources of Information

- Monitoring is not the only source
- Models, knowledge based systems
- Other sources

Monitoring Strategy - number of measurements

Monitoring Strategy - number of parameters

Monitoring Strategy- number of locations

- *Sampling locations in the Dutch coastal zone at the start of the monitoring program in 1975 (about **80** locations) could be reduced to **40** locations keeping the same detectable trend*

Macro invertebrates

- Frequency once every three year
- Every biotope is sampled (stones, sand, silt, clay)

Phytoplankton

- Frequency:
 - Freshwater: yearly, 13 x / yr.
 - Saltwater: yearly, 4-19 x / yr
- Method:
 - Chlorophyll-a
 - Analysis of algae groups

Fish

- Frequency: yearly, partly once every 3 year
- Methods:
 - Active fishery – quantitative, electric fishing, trawler-net fishing
 - Passive fishery – qualitative, fyke nets

Rijkswaterstaat

Informatiestrategie – trend bij Rijkswater

- **Meer samenwerking/kennisuitwisseling**
 - Nationaal (instituten, NWO-projecten, andere disciplines)
 - Internationaal (Noordzeelanden, Grensmaas)
- **Minder lab-analyses, meer in-situ metingen**
- **Data-assimilatie (meer meten met modellen)**
- **Voorzien in grotere informatiebehoefte met minder mensen**
